

SoundRite

SoundRite is our range of high-performance products to address critical acoustic problems in rooms.

Our products are portable and deliver reference-level sound in studios and ensure neutrality in home theatres. Since each product targets a different problem area, the range can be used selectively without a need to cover entire walls.

BASS TRAPS

Absorb low frequency build-up in the room, resulting in a punchier and tighter bass

BROADBAND ABSORBERS

Absorb high and mid frequencies and reduce the amount of reflection, thereby reducing the reverberation commonly referred to as 'echo'

DIFFUSERS

Spread the sound reflecting off them in all directions, while retaining the overall energy. Improve imaging and reduce flutter

SLAT RESONATORS

Absorb low-mid frequencies, thereby reducing the 'boom' in the room

Application Areas

- Demo rooms • Jam rooms
- Dedicated home theatre rooms
- Recording studios • Broadcast stations
- Project studios
- Night clubs

Why SoundRite would work for you

- It's easy-to-install.
- It's modular.
- It's re-usable.
